

13  
Gilden. 1625.

A  
New Almanacke and  
Prognostication for the  
yeare of our Lord God,  
1625.

Being the first from B. Textile  
or Leap-yeare:

Calculated and composed ac-  
cording to Art for the Latitude  
and Meridian of the Towne of  
Shipton vpon Stowre in the coun-  
ty of Worcester: And may well  
serue for all the South parts  
of Great Britaine.

By G. Gilden φιλόμαθι.

*Ludit in humanis diuina potentia rebus.*

LONDON,  
Printed for the Company of  
Stationers.

The common Notes and moucable Feasts,  
this present yeare of Grace, 1625.  
according to

The old account vsed in England.		The new Gregoriā account vsed beyond Seas.

Gilden, 1625.

*A Prognostication published for  
this yeare of our Lord and Sau-  
our IESVS CHRIST.  
1625.*

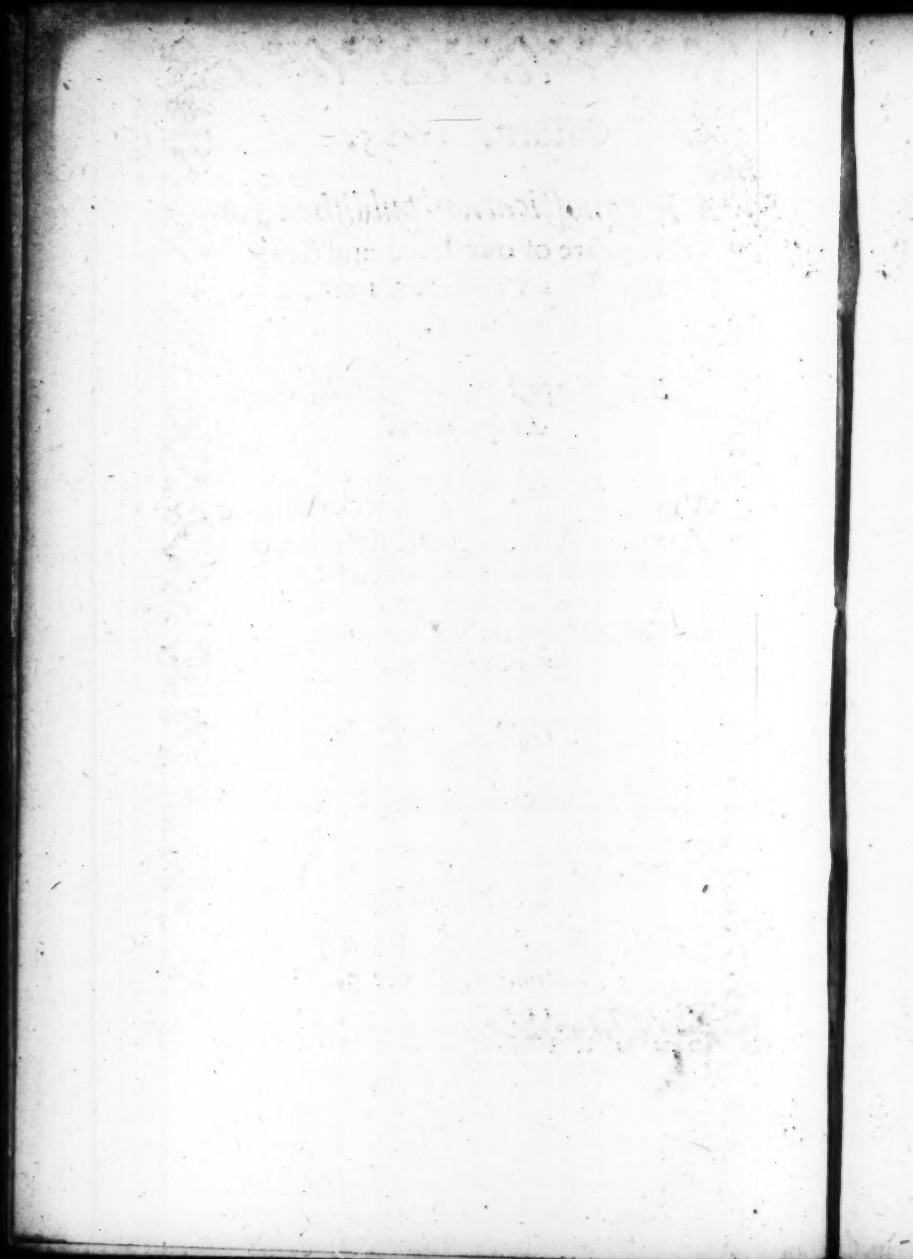

*Being the first from Bissextile, or  
Leape-yeare.*

Wherein is set downe according to  
Arte, an Astrologicall description  
of the likely seasons of the Four Quar-  
ters of the yeare.  
With other fit matter conuenient  
for such a worke.

By G: Gilden. φιλόμαθον.

*Ludit in humanis Diuina potentia rebus.*

LONDON,  
Printed for the Company of  
Stationers. 1625.

## To the Reader.

 Ourteous Reader, seeing that all our annual Almanackes are commonly published for the vse and behoofe of the common people; I haue held it best for their better vnderstanding, to be as plaine therein as possibly I could; and therefore haue written little in this Almanacke and *Astronomicall Table*, but what (with small paines euen of the simplest) may be easily vnderstood. And because the predictions of the weathers dispose, are commonly by the cōmon sort taxed of vntruth, I haue (as I haue formerly vsed) thought good onely to set downe the Aspects of the Moone and the rest of the Planets, for the Iudicious to find out of themselves, which being reduced into twelue columes, for the seuerall Monethes, I haue set them in my Prognostication, seeing the Table annexed is much pertinent thereunto: for the better vnderstanding whereof and the like tables, if any be desirous to enrich their vnderstanding with Mathematicall knowledge, he shall find the workes both of ancient and moderne writers so plentifully, as that there were neuer better or neerer helps for the attayning thereof, then are at this present,

*To the Reader.*

present as is well manifested by those excellent workes and inuentions that haue lately beene published. As namely the admirable Tables of Logarithmes, inuented and published first by that honourable Lord, *John Nepair* Baron of *Merchiston*, as also many new inuented excellent Instruments for the Mathematicks made in London in Wood, by my very good friend, *M. John Thomson* in *Hosier Lane* nere *Smithfield*, & in Copper by *M. Elias Allen*, at his house o-  
uer against *S. Clements Church* without *Temple Barre*. Whereupon I conclude, that the attay-  
ning of these excellent Arts, is now farre easier, then at any time in former ages they haue been. And so for this time, I bid thee fare well.

Thine G: *Gilden.*

---

Note that the Exchequer openeth Eight dayes before  
any Terme begins, except Trinity Terme, in which  
it openeth but foure dayes before.

A briefe Declaration of the disposition of the foure quarters of  
this yeare. 1625.

Of Winter.

**W**inter, The first quarter Astronomi-  
call began the last yeare the 12. day of  
December when the arch-flame of light being  
in his great est digression, from the Æquator  
to the South, and sited in the Tropicall poynt  
of Copricorne, bzinging diuers impediments  
euident in Nature which bereaueth our Sep-  
tentrionall parts of the heate and bigoz, where  
with at other times, the Sunne being nere,  
and moze eleuated, both preserve and cherish  
the Elements, & al things compassed of them,  
whether begitable or sensatiue.

So as now commeth cold and darkenesse, to  
be on this Northerne part of the Æquator, but  
most pleasant, and comfoztable tymes of Sum-  
mer to the inhabitants neere the South pole

Viz. Noua Gnine, Chaldi, Terra del Fu-  
egost.

In this small quarter it is good to drinke  
little, and eate well: because at this time mans  
Stomacke being hot, is aptest to digest.

The diseases incident to this quarter, are  
pulses in the face, Leprosie, Toothach, Red spots,  
Feauars,

uars, Scabs, Fluxes of blood in the inferior parts, payne of the eyes, Pallesyes, Couts and such like.

### Of the Spring.

**T**He Spring (according to Astronomical computation) beginneth when the Sunne enters into the Dodecatemorie of Aries, or poynt of the Intercession of the Eclipticke and Equator, whereupon are grownded the generall predictions of the whole yeare succedent, as the Radicall or Genethliacall resolution thereof, happening this present yeare the 11 of March, hauing then prouolued himselfe to the punctuall intercession of the vernall Equinox. By which equall vicissitude of night and day, the world thereby, for that time hath the fruition of his splendant rayes most gratefull to the dwellers within the temperate Zoane as Europe is: But ouer seruient and parching heats to the Inhabitants nere the lyne in the Torrid Zoane, as the most part of Affrica and East Indies, with the Spicery Iles, and also to new Spayne.

This quarter is most comfortable of all the yeare, and of nature, warme and moist, yet the ordinary diseases thereof are Leptosies: red

## A Prognostication.

spots, the Loth, ach, Feauers of blood, Pusshes  
or wheales in the face, small Pore, Kinge  
wormes, falling sicknesse, paynes in y<sup>e</sup> throte  
and necke, the Kings euill, wenues and griefes  
in the shoulders and armes, caused by blood,  
faynting and Frenlies.

### Of Summer.

**V**hereas continuance of Action doth  
necessarily add force of operation to  
all naturall agents, and as it commeth to passe  
in Winter, that by reason of the Sunnes re-  
mote position, that his continuance about the  
Horizon is shortest, and his absence vnder the  
same longest, thereby causing the shortest dayes  
and longest nights: So now in Summer,  
which quarter begneth when faire Phebus ha-  
uing arriued to the highest pitch of eleuation in  
our Horizon, by his farthest obliqvation to the  
North; hee produceth the longest day, and  
shortest night in the yeare, which will happen on  
the Cleauenth day of Iune.

This quarter is hot and dry in nature, and  
doth so accordingly alter the humors in mans  
body.

The sicknesses agreeing to the nature hereof,  
are griefes & torments about the brest, ribbes,  
and

and spleene, pusses, Leayzoses, and diseases of the face (as in the Spring) bleared & soze eyes, with other impediments therein. The Plurisie, Cough, heart and stomacke-aking, sorow, variations, feauers of blood, Apostumes, Pestilence, the Jaundize, payne in the belly, and secret parts, with other infirmities proceeding of melancholy.

Of Autumne.

**T**he Sunne hauing entred into Libra, the other Equinoctiall dodecatemozy, maketh squall Arches of Sunne-shine, on the surface of this Globe of Mortality, producing a second Spring, which falleth out this yeare on the 12. of September, and this quarter is by nature cold and drye.

The diseases thereof, are properly paynes in the backe, darkenesse of sight, retention of Urine, Fluxes of blood, paynes in the priuite parts, with infirmities in the face. Also the Canker, Fistuloes, Emroydes, the Stone and granell: Feauers of blood: and impediments in the eyes.

Of

Of the Eclipses this present  
yeare. 1625.

**T**his yeare 1625. there will be (though not all visible in these our parts ) Fourre Eclipses of the Sunne and Moone: namely, 2. of the Sunne, and 2. of the Moone: Whereof the first of the Moone onely will appeare in this our Horizon: and all the rest will be visible, in Countries farre remote, and therefore are needlesse of any great obseruation in this place.

But that first of the Moone will happen here with vs upon the 14. day of March, a quarter of an houre after midnight, and will bee then darkened 3 digits, or a quarter of her whole body. The beginning of which Eclipse will bee almost an houre before, & end almost an houre after.

The other Eclipses, because they will not be visible in this our Horizon: I hold it not fit to trouble the Reader with them.

*The Disposition of the Ayer in more  
particular.*

**F**oasmuch as I haue noted the Aspects of the Moone and Planets amongst themselves, againe

Gilden. 1625.

against every day of the Moneth, in these 12.  
columns following, I thought it would be no  
lesse conuenient then if setting downe the dayly  
dispose of the weather, I shall by a table imme-  
diately following the said Columns shew how  
by these aspects you may know the alteration of  
the weather: whereby you may conceine, that if  
by that Table alone, you may come neere to  
know the change of the weather. The whole Art  
is not so vaine as it is accompted; but auaileth  
to the knowledge of much truth.

The

From the chāg  
to the full, the  
Moone comes  
to the South,  
after noone.

From the full  
to the change,  
the moone cōes  
to the South be  
fore noone.

the left hand, right ouer against it towarde the right hand 3 and 4. & 48. shewing mee her comming to South to bee at 4. a clocke and 48. min : after noone. And when it was 5. dayes old as it was the day before being 5 first day of February, her comming to the south was iust at 4 a clocke afternoone.

**The Use of the  
Table.**

**T**he age of the moone being found in the kalender (that is) how many dayes is past from 5 time of her chang, Therewith enter this table, & hauing found it in 5 first colume to 5 left hand, if it be before 5 full moone; or to the right hand, if it be after the full moone: you shall haue in 5 middle colume, her comming to the South, before or after, as is noted in the foot of the Table.

As for example.

The 2 day of February, the Moone is 6 dayes old, wherewith entring the table in the first colume to

C

To

## A Prognostication.

¶ To know the houre of the night, by the Moone on a Sun-diall.

The time of the moones coming to South being found, in the former Table in manner aforesaid, looke on a Sun-diall, vpon what houre before or after 12. on the diall, the moones shadow falleth: for so many houres, it is before or after the moones coming to the South.

### Example.

I find the moone South the foresaid first day of February, at iust 4. a clocke afternoone. Looking on a sun-diall, I find her shadow to fall the 3 houre after 12. on the Diall, wherevpon, I conclude, it is iust 7. a clocke at night, which is three houres after her coming to the South.

## Astronomicall Elections in Physicke and Chirurgery, depending on the course of the Moone.

When the body is filled with naughty and superfluous humors, it is conuenient for thee to draw blood, so the heauens consent thereunto: And they are agreed therewith. Which being not circumspectly weighed, it may be most dangerous to the patient (whereof no vnderstanding man is ignorant) but when necessity bygeth.

As for the Pestilence, Plurisie, Phrensie, &c. Then though the heauens deny, yet a haire is speedily to be opened

opened Ad xgri salutem. This considered of Medicines: Some be Purgatiue, some Comfoztue, and others in the meane betwixt both.

Medicines Purgatiue, be either Soluendo or Leniendo. In the first the Mone must bee in S. m. or K. For the other, the Mone must bee taken, when shee worketh more in moistnes, then in dzenes; being in Δ. or K. with J. And you must take heede in the howse of giuing the medicine, least the ☾ haue any aspect with ☿ for he coniealeth the humors, making the medicine to worke lightly.

Likewise let her be free from any aspect with ♀. for he is the giuer of life, the helper and comfozter of the vertues: So that the medicine can but weakely expell the humors, making the body affected with an euill quality,

Furthermore, in all Purgatiue medicines, obserue these insuing rules: for in the administration of Physicke, 3. things are chiefly to be respected, viz. The Tyme, the Age, and the manner of administration.

### For the tyme of the yeare.

For the election of tyme, consideration is to be had, that it be not either in extremitie of heate or cold. And therefore Hipocrat: part 6. & 46. Aphoris: sayth, That the Spring and Autumne are best for Physicke: and Summer and Winter bad: and to bee bled but vpon necessity, for in Summer the humours boyle, by reason of heate, causing great annoyanceto mens bodyes: yet if necessity byrge, to take Physicke in Summer, it is best to take it by Vomite: And in Winter (if necessity require) by purgation.

# A Prognostication.

For the time of the Moneth.

Let not blood 3. dayes befoze and after the conjunction of the moone, and ♄. the like of the Coniunction of ♄. and ♀. neither let blood ♀ and ♄ being in conjunction, whilst ♀. is combust.

Let not blood the day befoze, and after the full of the Moone: The like obserue the Moone being in Coniunction with ♄. or ♀.

But the Moone in any aspect with ♄. or ♀. or a \* or ♄. with O. or ♄. produceth a fit time to let blood.

The time of the day.

The morning fasting is best, or in the Evening after perfect digestion: With this prouiso, that the ayre be temperate, and the winde not in the South.

For the Age.

Concerning the Age: you are to vnderstand that Decrepit old age: and young Infants, are vnfit to haue Physicke administred vnto them: or such as be vnder 14 yeaies of age: and moze then 56. yeaies old, or such as be exceeding fat, or very leane, and it is also dangerous for a young man to take much Physicke: for as a learned Philition saith, He that taketh much Physicke when he is young, will much repent it when he is old.

For the age to let blood.

In youth, from the change to the first quarter.

In middle age, from the first quarter to the full.

In elder age, from the full to the last quarter.

In old age, from the last quarter to the Change.

And after bleeding, vse no violent exercise, no sleeping, no venery, no gluttony.

The

# Gilden. 1265.

## The manner of Administration.

For the manner of Physickes administration: Al-  
bumazars opinion is: That the fittest time for purgati-  
ons are to bee elected, according to the motions of the  
Moone in watery signes: as ♄, ♀, and ♃.

Others hold opinion that the first halfe ♄. and ♀.  
are fitt tymes: and when the moone is voyd of course,  
it is indifferent to take purgatiue medicines.

♄ in ♄ in ♀ } not combust, is good to adoid cho } with  
\* ♀ Δ a- } ♀ } is good to purge phleme: (ler } electa-  
spect of ♄ } ♄ } good to expell melancholy: } aries.

♄ in ♀ in ♀ } ♀ } good to purge } choller } with  
\* ♀ Δ a- } ♀ } } phlegme } } electa-  
spect of ♄ } ♄ } } melancholy } } aries.

♄ in ♃ in ♀ } ♀ } good to purge } choller. } with  
\* ♀ Δ a- } ♀ } } phlegme } } pills.  
spect of ♄ } ♄ } } melancholy } }

♄ in ♄ in ♀ } ♀ } good to purge } choller. } with any  
♄ in \* ♀ } ♀ } } phlegme. } } kind of  
Δ with ♄ } ♄ } } melancholy } } medicine.

But note that you must looke that ♀ be not combust  
and that the ♄ or ♀ or ♃ or ♄ or ♃ either to the ♄ or be-  
tweene themselues doe not hinder the operation of the  
Physicke.

Neither let the Moone be in any of the signes that  
doe chesw the cubde as ♄, ♀, ♃. for then the medicine  
will stay but a little with the patient, causing him to  
Vomit, vnielste you meane to purge by vomiting.

Also in purging the Melancholy, let not ♄ haue do-  
minion nor ♄ in purging the Sanguine or the liver, nor  
♄ the cholericke, nor ♄ the head, nor ♄ in purging the  
lungs.

Ⓒ ;

The

## A Prognostication.

The Moone being fortified, it is ill to purge & braine.

In the admaistratio of purgations remember Haly his commentary vpon Ptolomy who saith, that the humors from the change of the Moone to the first quarter, and from the full to the last quarter, doe moue from the inward parts of the body, to & outward: And likewise from the first quarter to & opplition, & also from the last quarter to the change, they moue from the outward parts to the inward.

Therefore in the first and third weekes of the moone it is best applying externall euacuations: and in the second and fourth weekes internall purgations.

How the vertues be Corroborated.

The vertues be either Vitall, Animall, or Naturall. The Vitall vertues remayne in the heart. The Animall in the brayne: And the naturall in the liuer.

The vitall vertues are gouerned of ☉ and ♃. The Animall of ♀. and ♀.

The naturall of ♃ and ♀.

Other vertues be also be gouerned by the Planets, as the vertue attractiue is gouerned of ☉ The disgestiue of ♃. The retentive of ♄. And the expulsiue of ♀.

Also the signes thus gouerne the vertues. ♊, and ♋. rule the Attractiue. ♌. and ♍. the disgestiue. ♎. & ♏. the retentive, ♐. and ♑. the expulsiue.

Also the vertues be ruled by the Planets thus, ☉. the Wel-spring of the vertues vitall. ♀ of the vertues animall, ♄. of the Receptiue, ♃. of the Augmentatiue. ♀. of the Attractiue. ♀ of the Appetitiue, and ♃, of the Imaginatiue.

Therefore when you would fortifie any of these vertues, fortifie & Planet signifying the same, & it is done.

In letting blood, you must know what persons are fit to bleed: and what not: and if they bee fit, how it is  
With

## Gilden. 1625.

With the Patient inwardly, for his Complection and age, and outwardly, for the time of the yeare, and of the Moneth, as aforesaid.

### For Complexion.

For the flegmaticke, let the ☾ be in ♋, or ♑. When you draw blood, for the Melancholy in ♈, or ♎. for the Collicricke ☿, or ♋. And the Sanguine in any of the aforesaid.

The vnaccustomed are not to be Phlebotomized least it breed some malady, vnlesse necessity vize it. And you must also haue respect to the strength of the person.

### Certayne Elections concerning Husbandry.

It is best to plant in the last quarter of the ☾, so that shee be not aspected by ☿ ☐ or ☿ of ♄ or ♑.

Soow Cozne when the ☾ is in ☿.

Fell timber for building from Widsomer to Chyztmas in the wane of the Moone.

Seid or libbe cattell when the ☾ in ♋, ♑, or ♎.

Remoue trees the last quarter of the ☾, betwæne Michaelmontide, and Twelfetide.

The latter Writers of Husbandry doe report, that the seedes of tender hearbes, committed to the earth in an apt time, the Moone being in her first quarter, doe moze speedily shoote vp, then otherwise, especially being sowne after showers of raine on sunny & warme places: with obseruation that the wind bloweth not from the North, at the time of their sowng. And though the ancient Writers of Husbandry, haue prescribed proper moneths and dayes for the sowng of seedes: Yet may euery man obserue his owne rules according to the nature of the place and ayze where they are sowne. So that they consider also, that there bee some seedes, that by nature doe spring vp faster then others.

FINIS,
